

The double cosmic law of Seven

by Sebastian van Wingerden

In numerology the number 7 is the cosmic number. From times immemorial and even before it was known that every thing what happens on earth was and is written in the stars. That is the basic and ever successful paradigm of astrology. Watching the sky the sky watchers saw between a lot of fixed lights (the fixed stars) seven lights which were moving in respect of the others. They did not consider those lights as material balls but they simply described what they saw: (Twinkling) lights. Those lights has consciousness as light is consciousness. Hence the connection between astrology and astronomy. Those seven moving lights were the five planets, from Mercury to Saturn, the Moon and the Sun. At daytime King Sun chases all other lights away. Those seven moving lights were the indicators of change in time. Thus the number seven became a symbol of destiny, our cosmic destiny. That is why seven is the cosmic number and every astrologer from ancient times to Copernicus agreed on that.

However in 1781 Uranus was discovered, and later, in 1845 Neptune and in 1931 Pluto. From then on there were 10 moving lights we could read our destiny from and the cosmic law of seven was shaken. Is the number seven still that cosmic? Apparently not anymore. “See, it is all bullshit, this numerology and astrology,” the enemies of astrology exultantly boasted and the astrology community suffered hard times. Is this the end of astrology? No, that cannot be. After deep thinking some philosophers among which Mr. Carteret found the solution. *Now, in the dawn of the Aquarius era the cosmic law of seven is doubling* and so is our consciousness. The Ptolemaic model of the five planets plus the Sun (a star) and the Moon (a satellite) is expanded by a cosmic mirror picture, consisting of five cosmic planets and two spiritual points, the black Moon Lilith and the black Sun. Thus the cosmic order is restored. Put into words officially: *Every planet ‘visible by the naked eye’ gets a counterpart which is ‘not visible with the naked eye’.*

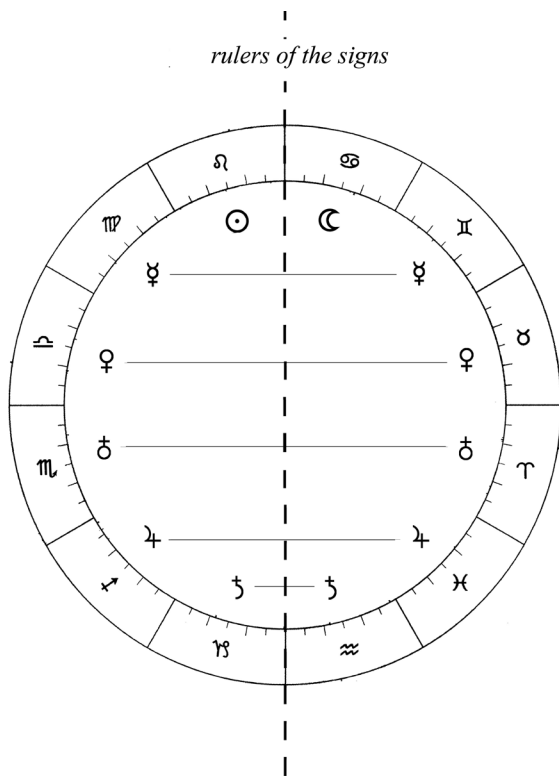

Those are the couples: Saturn - Uranus, Jupiter - Neptune, Mars - Pluto, Venus - Persephone (a planet still to be discovered), Mercury - Vulcan (a planet still to be discovered). Since the Sun is not a planet but a star it gets a spiritual point without mass as its double, the black Moon Lilith. The Moon as a satellite of the earth gets also a spiritual point as its counterpart, the black Sun. In the Ptolemaic system every sign has one ruler. In

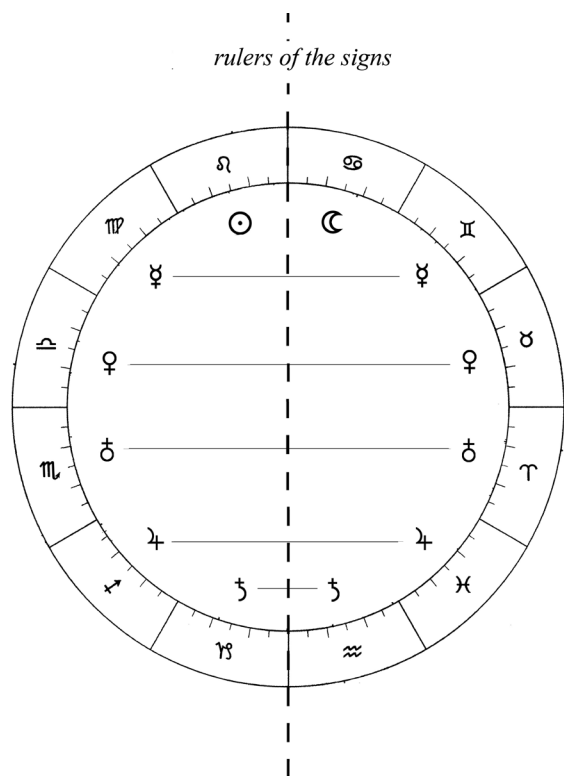

the expanded system every sign has two rulers, a day ruler and a night ruler.

The first three doubles are already realised. Saturn is the day ruler of Capricorn and the night ruler of Aquarius as Uranus is the day ruler of Aquarius and the night ruler of Capricorn. Neptune is the day ruler of Pisces and the night ruler of Sagittarius as Jupiter is the day ruler of Sagittarius and the night ruler of Pisces. The same counts for Mars and Pluto for Scorpio and Aries. This is an already established fact which you can read in every astrology handbook. The next two doubles are still two to be realised. The couples are complementary to each other and

The old Ptolemaic system

After the doubling

belong to each other. Mars is the soldier and Pluto the general, Jupiter the dream chaser and Neptune the dream, Saturn is conservative and Uranus radical.

Also Chiron has its place in this system. Chiron on its apogee is located between Saturn and Uranus, exactly where the mirror is located. Chiron is the mirror itself. Chiron is an asteroid. As such it cannot be a counterpart of a planet. Chiron once a planet but scattered into pieces by a giant collision, is the wound of our solar system. All the asteroids refer to centaurs and some kind of healing wound as we people experience our mirror picture, our shadow as a wound due to our lack of consciousness.

Two planets are still to be found: Persephone and Vulcan. The general expectation is that Persephone will be in an orbit twice as wide as Pluto and Vulcan again twice as wide as that. This means Persephone should be found in the kernel of 'Kuyper belt' and Vulcan beyond that in the 'van Oort belt'.

For Vulcan there are two candidates. In his book '*Genesis revisited*' Zecharias Sitchin writes about an mysterious object discovered by NASA on the edge of the solar system. It is to be seen in the infra red spectrum. The mystery is astronomers do not know whether it is a planet, a giant comet or a 'proto star', a 'proto star', a brown dwarf, which never became hot enough to become a star. On internet this mysterious object is known as TMR-1C located between the Hyades and the Pleiades in the sidereal constellation of Taurus. When I was taught about Persephone and Vulcan I got from a rough interpretation scheme of P&V and their ephemeris. These ephemeris were channelled by metaphysical observations of Mr. Carteret. To my surprise the location of TMRC-1C matches his ephemeris of Vulcan.

The other candidate is an object orbiting in an extreme elliptical orbit around the Sun in about 3600 years. Zecharias Sitchin writes about this in his book '*The 12th planet*'. A planet, Marduk,

coming from outer space once collided with the former planet Tiamat and smashed Tiamat into pieces creating the asteroid belt. Since then Marduk is orbiting around the Sun in a grand ellipse reaching its closest distant to the Sun every 3600 years. It returns every 3600 years to the orbit of the asteroids, reaching its closest distant to the Sun.

Nostradamus gives a confirmation of this thesis.

Centurie IV.29

The hidden Sun eclipsed by Mercury

Will be placed only second in the heavens.

Vulcanus will make meatloaf of Hermes

After that the Sun will be seen pure, shining and golden.

Picture this: A comet outshining the Sun to be seen for several weeks or months bringing a new logic on earth stronger than the logic of Mercury (Hermes).

For Persephone, which should be discovered any moment, there are a lot of candidates. The objects in Kuyper belt are divided in two populations. 'Persephonee' will be found in category B.

A) Dynamically hot dwarf planets with a high inclination up to 30 % and with a very ecliptic orbit. Those are called Plutinos. Their presence has its peak at 39 AU (Astrological Units) and form the inner belt of the Kuyper belt. Pluto is a Plutino and the biggest too. Neptune is 30 AU.

B) Dynamically cold dwarf planets with low inclinations and a nearly circular orbit. Their presence has its peak at 44-45 AU and form the kernel of the Kuyper belt.

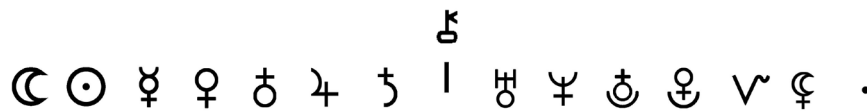

Every year more KBO's (Kuyper Belt objects) are detected. Quaoar is a potential candidate since he is a big one and his orbit is nearly circular. Haumea, Eris, Sedna and Makemake are elliptic so they are Plutinos and not candidates.

With the discovery of 'Persephonee' a new consciousness will become common in the world. This new consciousness does not come overnight. It began in the nineteen sixties and is not at its climax yet. It concerns the rise of the power of the mass media, TV, internet an Facebook and what is to come. That is the Libra part. The Taurus part is the rising consciousness that planet earth is our house and we should not foul our own nest. Before the sixties nobody knew about this.

The Sun is a star, the centre of the solar system connected with your heart, the centre of the human soul. The Moon is part of the earth and is just like the earth a result of a nova, an exploded blue dwarf. A blue dwarf gets its energy from nuclear fusion. Nuclear fusion starts with the fusion of Hydrogen atoms to Helium. Helium will be transformed in heavier atoms once the hydrogen fusion does not supply enough energy for the star. Those heavier atoms fuse into heavier and heavier atoms until the ferrum atom (iron) is created. That is the end of the nuclear fusion process. On that moment the blue dwarf explodes into a nova. The outer layers of the star are thrown in the universe and the iron core remains. Since the core of the earth consists of mainly iron one might conclude the earth is the result of a nova. Where otherwise did all that iron come from? Not one other planet has such a enormous iron core.

So the Moon and the Sun are of star-like energy and don't have a planet as a counterpart but a spiritual point without a mass. The Sun has the black Moon Lilith as its counterpart and the Moon has the black Sun as its counterpart. Leo has as its day (Yang) ruler the Sun and as its

night (Yin) ruler the black Moon Lilith. Cancer has as its day (Yang) ruler the Moon and as its night (Yin) ruler the black Sun.

The more remote the planets are, the more powerful they become. Saturn crushes the Moon until Jupiter and Pluto crushes Saturn. You can read this on the transits: the slower the planets go the longer they occupy a house, so the more impact the transit has on your life.

This means that the black Moon Lilith and the black Sun are the strongest influences in the astrology chart. That's why the influence of every planet in a conjunction with the black Moon Lilith fades away when the black Moon Lilith closes.

Family of the Plutinos is the comet Halley. He did not survive the forces creating the elliptical orbit of the Plutinos but fell altogether out of the Kuyper belt. Every 76 years she falls towards the Sun to turn back in a grand ellipse far in the Kuyper belt like a yo-yo. There are a lot of comets but Halley is the biggest. Her appearance at the sky is marked by a fiery tale. That is why she is so famous. Every time she falls towards the Sun she loses mass burned by the Sun wind. Over a few thousand years she will be vanished. Just as Pluto and Persephone comet Halley has a highly political meaning. She is a fallen angel to liberate mankind from dark energies. Every time she appears at the sky she give a new impulse in the material plane. As Rudolf Steiner has written: 'By the coming of Halley the material relationships and interdependence among the people will be changed. The basic power structures which divides the rich from the poor will be reformulated.' That means: everywhere where the power, that makes the material rules concerning money and possession, has fallen asleep and have become rigid and unfair will be broken down. After the arrival of Halley some imperium and superpower will tumble down. That is why comet Halley is feared that much. But she only breaks down unfair structures and by that she is a cosmic purification of the power structures. In antiquity this was well known. So when the arrival of Halley was predicted in the year 66 AD the Jewish community thought it would be the end the unfair repression of the Roman occupation. They revolted massively in the faith of comet Halley. However the result was the opposite. They destroyed their own state and the diaspora began. Cynically the Roman estate was rejuvenated. Vespasian the big general who massacred and defeated the Jews became a few years later the new emperor of Rome heralding a new epoch in the history of Rome.

Some registered dates of the arrival of Halley: 240 BC, 66 AD, 1531, 1607, 1682, 1759, 1835, 1911 and 1986. In 2061 he will reappear again.

230 BC: Nine years later, in 221 BC, the first emperor of China, Ch'in, unified China bringing an end to times of trouble.

66AD: Destruction of the Jewish state and a new Roman era.

1531: The end of the Aztec and Inca empires. 1534 was the end of Catholic rule in England.

1607: Not that clear. It was the middle of the religious wars in Europe. Ming dynasty in China shaking.

1682: The end of the short lived superpower Holland followed up by English rule.

1759: France lost all their colonies to England followed by a tax nightmare causing the American Revolution. Note Pluto was to enter Capricorn.

1835: Not that clear but the post Napoleonic Monarchs had to admit ruling the country was too difficult for one man alone and democracy was rising.

1911: The end of both the Tsarist rule and the Ottoman rule and the end of the emperor of China. This was a strong one.

1986: The end of communistic rule in Russia. Also big political changes in China.

2062: Change of power in the middle east and China takes over world power.
